

guns to float throughout our cities and come into some of our cities illegally? We cannot save everybody. I understand that. But think about if we could cut it down to maybe just 15,000 people a year dying. As far as I am concerned, one person dying is one too many.

I promised my son as he was recovering many years ago that I would do whatever I could to prevent another family from not going through what our families did. And here it is 11 years later. Here we had a terrible tragedy yesterday in Nebraska. Not long ago, we had a terrible tragedy at Virginia Tech. Before that, we had another terrible tragedy at another mall in the Midwest. We can think about all these terrible tragedies that are happening more and more not just in our inner cities now but in places in our country that we never thought we would ever see gun violence.

This Nation needs to decide what it is going to do to stop this rampage of unnecessary killings of innocent people. Three hundred thirty thousand people killed in the 11 years I have been here, I hope we can do better. I pray for the families. I pray for the communities.

#### IN HONOR OF THE HONORABLE HENRY HYDE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. MICA) is recognized for 5 minutes.

Mr. MICA. Mr. Speaker and my colleagues, one of the greatest voices to ever be heard in these Chambers has been lost to the ages. I rise today to pay tribute to my good friend, a great American and my former colleague, Henry Hyde. Tomorrow in Illinois, one of the State's most capable and eloquent Members of Congress will be laid to rest.

It was my distinct honor to meet Henry Hyde, to serve with Henry Hyde and to call Henry Hyde my friend. In this House Chamber over the past 150 years, there have been many who have spoken. I submit that if you had the privilege to hear Henry Hyde speak here, you were indeed most fortunate.

In this House of Representatives over the past several centuries, there have been many distinguished individuals. I submit that not only was Henry Hyde one of the most distinguished, but also one of the most appreciated individuals, one of the finest gentlemen, one of the greatest Americans to serve in this, the people's House.

Whether he was defending the unborn or relating his position to us on any matter before this House, Henry Hyde always spoke with dignity, conviction, principle and eloquence. When Henry Hyde addressed this House, its Members and all Americans listened. While everyone who knew Henry Hyde can tell us a very special story and personal experience about knowing Henry Hyde, there are several memories that I will always fondly cherish and remember.

I recall when Henry came to my district, came to my home in Florida. I will never forget when Henry Hyde stopped me, actually in this aisleway, here on the floor of the House, and in that aisleway he complimented me on my remarks that day. Imagine, Henry Hyde, the master orator, praising such common words. How honored I was by his compliment to so junior a Member on that day. There are many other stories I can tell about Henry Hyde and I know we can all share the other stories, but let me tell you in closing to relate one of my last memories of this great man.

I had the privilege of traveling with Henry to the United States European interparliamentary meetings overseas, and on my last trip with Henry to one of these meetings, one of the last times that Henry Hyde as I recall him serving as chairman of the International Relations Committee, we were flying together with others across the Atlantic to make our next day's meeting. I woke up in the middle of the night and everyone in the cabin on the plane was sleeping, with one exception, and that was Henry Hyde. Some of you may recall Henry had been quite ill towards the end of his service. He required assistance to walk, and I knew how uncomfortable and how difficult it was for him to travel. But here was Henry Hyde so committed to his responsibility, while in such great personal pain and discomfort that he could not rest, he had to sit up in his chair all night, but he was fulfilling his duties and his responsibilities. I knew that night and I knew when I first met him, I knew also when I first heard him, and I have known, and I have been honored to call him my friend, I have had the opportunity to know a great man, a great American, the gentleman from Illinois (Mr. Hyde).

To Henry's wife and family, and on behalf of all the people of the Seventh Congressional District of Florida, and personally, I extend my deepest sympathies.

#### CLIMATE CHANGE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. HOLT) is recognized for 5 minutes.

Mr. HOLT. Mr. Speaker, for the past 20 years, my colleagues in the scientific community have been issuing warnings that the release of greenhouse gases is altering the Earth's climate in ways that are expensive and deadly. It is well established in the scientific community that the climate change of recent decades can be attributed to the way we produce and use energy. In fact, the greatest insult to our planet is the way we produce and use energy.

As an energy scientist, I know how much can be done technically to reduce our dependence on fossil fuels and to slow the rate of global climate change. In fact, many countries around the

world are taking those steps. Today, here in the House of Representatives, we have passed historic legislation which will finally take the long overdue first steps toward addressing global climate change and addressing our long-term energy needs. I am proud to have worked with my colleagues on this comprehensive bill which will move us toward reducing our dependence on fossil fuels and will spur the economic growth and will create new jobs and stave off further damage to our environment and our climate. This is one of the principle subjects that I have spoken about and worked on since I first ran for Congress, and it is one of the reasons, I believe, that my constituents sent me to Congress.

There are some excellent provisions in this bill that will drastically reduce our greenhouse gas emissions. This includes increasing the average automobile fuel economy to 35 miles per gallon by 2020. It will require the nationwide implementation of renewable portfolio standards requiring 15 percent of the Nation's energy in power generation to come from renewable sources. And these two provisions alone will save consumers as much as \$40 billion in a dozen years and will decrease our annual greenhouse gas emissions by up to 324 million tons.

H.R. 6 will reverse many of the environmental detrimental policies that this administration and this country have implemented over the past 6 years. It will repeal the \$23 billion in tax subsidies and royalty relief provisions for fabulously wealthy oil companies.

It will use this money to invest in renewable energy research and extend existing tax credits for the production of renewable energy. My home State of New Jersey has led the way on these issues. New Jersey has already implemented a renewable portfolio standard that requires 20 percent of the State's energy to come from renewable sources by 2020. New Jersey is the second leading State in solar energy production, with over 2,400 solar installations in place, and I am told it is the fastest growing market for solar energy in the United States.

The legislation passed here today will require our appliances and buildings to be more energy efficient, it will provide job training to help workers become part of the green economy, it will require the United States to re-enter into the debate on global climate change, it will provide historic investment in renewable energy and biofuels research.

Of course, this bill is not enough. If it becomes law, it will be a start, a very good start. Having passed this bill, we will be able to consider other alternative energy and climate change legislation, and I am confident that we will.
